Julie drugs may be back on sale

POLICE believe drugs now being offered for sale in England may have been produced in Tregaron during "Operation Julie" - the massive drugs raid of the 1970s. The appearance on the street of drugs similar to those seized during the operation has led police to believe that a hidden cache from Tregaron may have found its way back onto the market. "Microdose of LSD were seized during the operation and this is the form of the drug which has suddenly turned up in Hampshire. Nowadays LSD is produced on transfer," said a police spokesman. "Somebody may be using an old technique or it could be that a hidden store of the drugs from Operation Julie has been brought back out and is on sale," he added this week. He warned that the drugs could be particularly dangerous if they have been stored for such a long period.
